Commit	Type	Description
244d12a	fix	Google OAuth provider in layout (single instance), remove width 100% warning
8d59239	feat	Google OAuth sign-in/sign-up with Continue with Google button
4fd1c55	fix	Apply button shows correct state after signout — add isLoggedIn guard
79dd713	fix	Header overlap on application status pages — add pt-20, remove nested main
5b29d5d	fix	Application status shows alumni + header link + civilstatus pages
0deddf9	fix	Case-insensitive email query in my-application route
d57dd90	fix	Backfill alumni profile_picture from auth table in retrieve-all
7492255	fix	Case-insensitive email match for alumni profile picture fallback
3da79cf	fix	Admin sorting, alumni notifications, file validation, draft notifications
c8f8903	fix	Edit restriction + rejected document state
7811d0f	fix	Alumni draft restore, draft navigation, re-upload email, doc status, app status header
b2bd73f	fix	Logout clears header avatar+notifications, alumni form uses auth profile picture
4c0eab6	fix	verifiedEmail → email in apply-button.tsx after merge
5aebb59	feat	OTP email verification, forgot/reset password, PWA install, nodemailer SMTP
fb2f0e9	fix	Admin mobile responsive, draft system, auth remember me, alumni/program apply, password validation, form fixes

1. Auth & Security

- Password validation: minimum 8 characters, 1 uppercase, 1 lowercase, 1 number
- Remember Me: localStorage (checked) vs sessionStorage (unchecked) — survives browser close
- Logout clears client state, server httpOnly cookie, localStorage drafts
- Header avatar + notifications hide immediately on logout via isLoggedIn guard
- Profile modal signout now calls AuthContext.logout() properly
- Google OAuth "Continue with Google" on both signin and signup pages
- GoogleOAuthProvider single instance in root layout
- Google OAuth backend: verify token, find/create user, issue JWT

2. Email & OTP

- nodemailer + Gmail SMTP (replaced Resend SDK)
- OTP code generation on signup + email via nodemailer
- Verify-OTP page: 6-digit code input + resend countdown (60s)
- Forgot password page: email input → reset link via email
- Reset password page: token validation + new password form
- Domain auto-detect via req.nextUrl.origin (no hardcoded URLs)
- Fallback to direct JWT if OTP/reset DB columns not yet migrated
- supabase-migration.sql for DB column creation

3. Admin Panel

- Mobile responsive sidebar: md:w-64 wrapper, z-[60] hamburger, dashboard header pl-20
- Dashboard recent activities table gets mobile card view
- Applications sorted by status priority: Under Review → Reject → Approve → Draft → Delete
- Admin accept/reject alumni sends activity log notification to user's email
- Admin delete application notifies user via act_logs
- Civilstatus pages also get Header + Footer + JWT verify + Suspense

4. Program Applications

- Apply button disabled for existing applications (Under Review, Accepted, etc.)

- Apply button disabled for alumni members
- Apply button re-enabled when application rejected or admin remarked
- Apply button resets correctly after signout via isLoggedIn guard
- File upload validation: PDF, JPG, PNG only (both client and server)
- File size limit: 10MB per file
- Re-upload now includes email + applicantName in FormData
- Marriage certificate field shown only when civil_status = "Married"
- Delete application API fix: passes {id, email} correctly

5. Application Status Page

- Header + Footer + JWT verify + Suspense wrapper added
- Civilstatus pages same treatment
- Header dropdown "Application Status" link fixed: /form/applicationstatus
- Alumni Registration card shown alongside program application
- Per-document status badges: Verified  / Rejected  / Uploaded  / Missing  / Needs Revision 
- forms_approvals JSON column parsed for per-document verified + remarks data
- Edit restriction: locked for pending/accepted, unlocked for rejected or admin remarked
- Case-insensitive email query in my-application route
- Fixed header overlap with pt-20 top padding

6. Draft System

- Multi-program drafts array (eteeap-application-drafts) replaces single key
- Alumni draft (eteeap-alumni-draft) shown on drafts page
- Cross-contamination fix: alumni form no longer clears program drafts
- Alumni draft fully restored on continue: all 12 form fields (name, nickname, year, birthday, email, education, program, work, certificates, experience, transformation, visibility)
- App draft continue navigates to /form (not /form/civilstatus)
- User draft delete sends activity log notification

7. Alumni

- Duplicate check prevents re-joining if active profile exists

- Profile picture auto-uses Account Details picture in alumni form
- Profile picture upload as optional override
- Alumni form redirects to /alumni feed after successful submission
- Profile picture backfill: retrieve-all enriches missing profile_picture from auth table
- Case-insensitive email match for current user's own alumni card
- Alumni retrieve route extracts email from JWT when body is empty

8. PWA / Mobile Install

- manifest.json with app icons (192x192, 512x512) from ETEEAP_LOGO.png
- Service worker registration in root layout
- Mobile-only install prompt banner (temporary dismiss, re-shows next visit)
- iOS/Android meta tags: apple-mobile-web-app-capable, theme-color, etc.

9. Data & API Fixes

- my-application route queries by email instead of nonexistent user_id column
- admin_settings route: GET handler added (was empty)
- alumni_profiles/retrieve: POST handler for email-based lookup
- profile_picture column conditionally included in alumni submit
- upload-picture route created for alumni profile picture uploads
- activity_logs route: added "Verified Alumni" and "Rejected Alumni" action types
- apply-button.tsx: verifiedEmail → email fix after merge conflict

New Files Created

File	Purpose
src/lib/resend.ts	nodemailer SMTP email sender (replaced Resend)
src/components/common/InstallPrompt.tsx	PWA mobile install banner
src/app/services/supabase/auth/send-otp/route.ts	Generate + email OTP
src/app/services/supabase/auth/verify-otp/route.ts	Verify OTP → issue JWT
src/app/services/supabase/auth/google-auth/route.ts	Google credential → JWT
src/app/services/supabase/auth/forgot-password/route.ts	Gen reset token + email

src/app/services/supabase/auth/reset-password/route.ts	Verify reset → update password
src/app/services/supabase/alumni_profiles/upload-picture/route.ts	Upload alumni picture to storage
src/app/(pages)/auth/verify-otp/page.tsx	OTP input page
src/app/(pages)/auth/forgot-password/page.tsx	Forgot password page
src/app/(pages)/auth/reset-password/page.tsx	Reset password page
public/manifest.json	PWA manifest
public/icons/icon-192.png	PWA small icon
public/icons/icon-512.png	PWA large icon
supabase-migration.sql	DB migration for OTP/reset columns
